

# Science & Humanities Project

A reflection on Victor Gijbbers view of Karl Popper and the logic of falsification

## Abstract

While studying for science & humanities, I watched these videos from Leiden University by Victor Gijbbers. When watching; Chapter 1.4 Karl Popper and the logic of falsification, I noticed a lot of dislikes under the video. This is interesting because it is a video from the same university where I am studying, and other videos from him did not seem to have this many dislikes. However, people in the comments thought that the presenter was failing to comprehend a simple point of Karl Popper. In my own video, I will elaborate on what the presenter tells us in this video and then compare it with the comments and Poppers original work.
